

# EIB SUPPORT TO A SUSTAINABLE BLUE ECONOMY

28 November 2023

# EIB: STRONG SUPPORTER OF A SUSTAINABLE BLUE ECONOMY

EIB support to blue economy by sector 2018-2022

EIB signed amount (million EUR)

2018-2022

~€7 billion investment

€24 billion leveraged

85% contributing  
to climate and  
environmental goals

# No EIB operations on energy transition for fisheries and aquaculture

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sustainability</b> | <ul style="list-style-type: none"><li>• Many investment : risk increasing levels of fishing</li><li>• Sustainability-oriented projects may not provide sufficient benefits to engage fishers</li></ul>                                                                                                                                                                                                                               |
| <b>Scale</b>          | <ul style="list-style-type: none"><li>• There is limited potential for sufficiently large investments to meet EIB requirements (€15-20m+)</li><li>• Naturally, fishers have a preference for any available grant funding and loans without conditions</li></ul>                                                                                                                                                                      |
| <b>Complexity</b>     | <ul style="list-style-type: none"><li>• Energy transition and sustainability requires coordinated stakeholder action</li><li>• Complex and time-consuming due diligence and transaction design, especially relative to final deal size</li></ul>                                                                                                                                                                                     |
| <b>Intermediaries</b> | <ul style="list-style-type: none"><li>• There are limited intermediaries with sufficient expertise and capacity to deliver fisheries investments</li><li>• Seasonality and variable income streams within the industry do not align well with the monthly payment structure of most loans</li></ul>                                                                                                                                  |
| <b>Counterparties</b> | <ul style="list-style-type: none"><li>• Many fisheries comprise large numbers of small companies or independent fishers, with many lacking structures suitable for taking on larger scale finance</li><li>• Small-scale fishers are often profitable, but lack sufficient collateral for traditional finance and may not own the vessel and equipment they use</li><li>• Economic, social, and environmental due diligence</li></ul> |

# ... NO LACK OF INTEREST

- EIB ready to consider energy transition investments in fisheries and aquaculture (*meeting EIB economic, social and environmental criteria*)

Examples of areas that could be considered:

- Port infrastructures supporting low-carbon solutions for fishers (low carbon energy, logistics)
- Low-carbon solutions for fisheries or aquaculture production, provided these operations are certified sustainable or committed to be
- Low-carbon, energy efficient seafood processing solutions
- Holistic approaches (supply chain, stock rebuilding)

# Ex: Vessel sustainability upgrades

## Summary of Investment Opportunity

- Most fishing vessels use diesel fuel, which has negative environmental impacts through air pollution and carbon emissions.
- The EU CFP supports the transition to low emission energy sources (e.g. hydrogen, biofuel, solar, electric), but technological and financial barriers prevent broader/faster uptake.
- Investment could be provided to either ports to enable upgrades (e.g. electric vessel charging stations) and/or to engine/vessel manufacturers.

## Indicative Structure

- Investee: Port authority or engine/vessel manufacturer
- Indicative investment amount: Variable depending on approach
- Possible grant support: ?

EU fishing port to install technology for low-emission vessels (e.g. charging stations, battery storage, solar generation, green-hydrogen facilities, etc.), with repayment through fees paid by vessel owners.

Engine/vessel manufacturer to enable investment in technology that reduces production costs for more environmentally beneficial models, improving uptake. Repayment would be through increases in sales revenues from increased uptake.

## Advantages & Challenges

### Advantages

- Highly capital intensive for ports or larger vessels
- Alignment with EC Energy Transition strategy
- Benefits to fishers in reducing costs

### Challenges

- Sustainability & Gears
- Enough Clients? Incentives?
- National banks to finance clients?

# ADVISORY SUPPORT

## Technical assistance and financial advisory via fi-compass or other mandates

Providing capacity-building activities and financial advisory services to EMFAF Managing authorities in order to support set-up and implementation of EMFAF financial instruments

### 1 Access to a single knowledge hub

- ▶ A-Z information about EU Shared management financial instruments at [www.fi-compass.eu](http://www.fi-compass.eu)

### 2 Capacity building training sessions for Managing authorities and relevant stakeholders in view of EMFAF Financial instruments, based on:

- ▶ Level of knowledge/experience
- ▶ Specific areas of interest

### 3 Learning opportunities

- ▶ fi-compass market analysis and publications
- ▶ Content with focus on the FI regulatory and practical side
